Mini Coupe & Roadster “Targa Raze” Styling and Performance Kit

ISO 9001: 2008 Certification by SGS and TÜV SÜD

Revozport is proud to announce the success in achieving Asia's first automotive & lifestyle composite product with design and production to become fully ISO 9001:2008 certified by both SGS & TÜV SÜD at the same time.

This news confirms that Revozport has been officially audited by the two most stringent certification body and proves that Revozport have met all the quality and management criteria of this bestowed internationally recognised standard.

Revozport is Asia 1st composite product with design and production capability to achieve ISO 9001:2008 and certified by both SGS and TÜV SÜD. To achieve ISO 9001 status Revozport demonstrated to SGS & TÜV SÜD that we have rigid quality management systems in place, including technical training, quality control management and thorough staff training for new product development and implementation.

REVOZPORT’s Mini Targa Raze for Coupe & Roadster

To celebrate this milestone, the company releases the new aero and performance kit for the new Mini R58 Coupe / R59 Roadster. Completely designed in-house by its designer from the UK office, the sleek and sporty Mini Coupe has turned into an extreme sports coupe that weight 30kg lighter and a power boost from 181hp to a staggering 250hp. To achieve this, Revozport team up with the engineering team at TARGA Racing whom is in charge of building the performance kit and the aerokit is complete built with carbon composite fibre with the latest curing method.

30kg Lighter by use of carbon composite product

The Mini Targa Raze consist of a complete aerokit that lightens the car by 30kg and widen the wheel track by 15mm both front and rear. Thanks to the extensive use of carbon & kevlar composite material. The complete kit consist of 23 parts including a complete front bumper that equips with integrated LED DRL, a lightweight vented bonnet, a rear bumper with integrated chrome exhaust pipe and LED reverse and foglight, Side skirt that has air scoops, widened front and rear fender trim, a duckbill lip spoiler with an optional GT wing and the most amazing part, the complete carbon fibre roof panel. The complete carbon roof panel is no stranger to Revozport as this product and development technology has been widely use in for application to BMW 1M, E92 M3, Z4 Coupe, Skyline GTR R35 and more. The weight savings is incredibly significant for such a compact car.

Performance Upgrade

Performance upgrade was achieved through the use of a complete race engineered Titanium cat back exhaust that only weigh 5kg, a bespoke ECU mapping, carbon induction pipe, bigger intercooler and a pair of tricked camshafts. The result is a staggering 250hp.

The Mini "Targa Raze" will be displayed and tested in the Zhuhai International Circuit in October 2012.
